I	Introduction	1
----------	---------------------	----------

1	Background and Motivation	3
1.1	Worldwide Mobile Communication	3
1.2	Relevant Electromagnetic Spectrum	5
1.3	EMF Health Risk Assessment	6
1.4	Laboratory Studies	8
1.5	Specific Absorption Rate	10
1.6	RF Safety Standard	10
1.7	Motivation	12
1.8	Objectives and Chapter Overview	13

II	Exposure Assessment	17
-----------	----------------------------	-----------

2	Thermal Regulatory and Thermal Breakdown Thresholds	19
2.1	Abstract	19
2.2	Introduction	20
2.3	Material and Methods	22

2.3.1	Animals	22
2.3.2	Exposure Protocol	22
2.3.3	Temperature Measurement	24
2.3.4	Evaluation of Thermal Response	24
2.3.5	Radiofrequency Exposure	25
2.4	Results	32
2.5	Discussion	33
2.6	Conclusion	37
3	Assessment of ELF MF of Mobile Phones and Proposal for Worst-Case Signal for Bio-Experiments	39
3.1	Abstract	39
3.2	Introduction	40
3.3	Material and Methods	41
3.3.1	B-Field Probes	41
3.3.2	Measurement Procedure	42
3.4	Results	44
3.5	Generic Exposure Test Signal	48
3.6	Discussion and Conclusion	48
4	Add-on ELF MF Exposure Setup Proposal for Studies with Human Volunteers	51
4.1	Introduction	51
4.2	Setup Design	52
4.3	B-Field Strength and Distribution	53
4.4	Current Requirements	54
4.5	Summary ELF Add-on Setup	55
III	Exposure Systems and Studies	57
5	Flexible Exposure Setup for Experimental Provocation Studies at 884 MHz	59
5.1	Abstract	59
5.2	Introduction	60
5.3	Requirements	61
5.4	Exposure System Design	65
5.4.1	Low Weight Stacked Micropatch Antenna	65

5.4.2	Heat Load	71
5.4.3	Headset	72
5.4.4	Exposure Room, Monitoring and Control System	77
5.4.5	Exposure Signal	82
5.5	Dosimetry and Validation	84
5.6	Conclusion	92
5.7	Study Abstract: PERFORM C	93
6	Exposure Systems for Large-Scale <i>In Vivo</i> Laboratory GSM/DCS Risk Assessment Studies	95
6.1	Abstract	95
6.2	Introduction	96
6.3	Objectives and Requirements	97
6.3.1	Study Outline and Objectives	97
6.3.2	Exposure and Environmental Requirements . .	99
6.4	Setup Design	100
6.4.1	Mechanical and Electrical Design	104
6.4.2	Signal Generation, Monitoring and Control of Exposure	109
6.4.3	Exposure Signal	112
6.5	Dosimetry and Validation	116
6.5.1	Dosimetric Method, Tools and Models	116
6.5.2	Initial Setup Challenges	124
6.5.3	Results of Dosimetry, Uncertainty and Variations 126	
6.6	Setup Performance during Study	134
6.7	Conclusion	138
6.8	Study Abstracts: PERFORM A	140
6.8.1	Fraunhofer ITEM (Germany)	141
6.8.2	RBM (Italy)	143
7	SAR Uniformity in Ferris Wheel Setups	145
7.1	Abstract	145
7.2	Introduction	146
7.3	Objectives	146
7.4	Examined Ferris Wheels	147
7.5	Ferris Wheel Setup Design	147
7.6	Material and Methods	150

7.6.1	Experimental Investigations	150
7.6.2	Temperature Method for SAR Uniformity As- essment	152
7.6.3	Measurement Procedure	154
7.6.4	Dummy Characteristics	155
7.6.5	Numerical Evaluation	156
7.7	Results	157
7.8	Discussion	161
7.9	Conclusions	162
