

## CONTENTS

---

1	INTRODUCTION	1
1.1	Motivation and rationale . . . . .	2
1.2	Pressure sensor integration approach . . . . .	3
1.3	Objectives & outline of the thesis . . . . .	5
2	STATE OF THE ART	7
2.1	General concepts for blood contacting implants . . . . .	7
2.1.1	Implant interaction with the host body . . . . .	7
2.1.2	Insights gained from cardiovascular stents . . . . .	8
2.1.3	Implications for sensing applications . . . . .	9
2.2	Pressure sensor integration for VADs . . . . .	10
2.2.1	Blood contacting pressure sensors for heart failure monitoring . . . . .	11
2.2.2	Integrated pressure sensors for VADs . . . . .	15
2.2.3	Summary of sensor technology . . . . .	17
2.3	Parylene-C as biomedical packaging material . . . . .	17
2.4	Chapter Summary . . . . .	20
3	THEORY AND MODELLING	21
3.1	Media separating packaging for pressure sensors . . . . .	21
3.2	Membrane compliance of simple membranes . . . . .	25
3.3	Concave media-separating diaphragm . . . . .	28
3.4	Analysis of temperature influence . . . . .	33
3.5	Drift analysis . . . . .	35
3.6	Chapter summary . . . . .	38
4	MEASUREMENT PROOF OF CONCEPT FOR CONFORMAL MEDIA SEPARATING MEMBRANES	41
4.1	In-vivo validation of sensor location . . . . .	41
4.2	Fabrication process of conformal MSM . . . . .	44
4.3	Demonstrator pressure sensor assembly with MSM . . . . .	51
4.4	Pressure testing setup for MSM . . . . .	54
4.5	Signal characterisation methods . . . . .	58
4.6	Results & discussion . . . . .	62
4.7	Chapter Summary . . . . .	67

5	NANOSTRUCTURED TITANIUM SURFACES FOR IMPROVED PARYLENE-C ADHESION	69
5.1	Introduction	69
5.2	Experimental	70
5.2.1	Materials and substrate preparation	71
5.2.2	Preparation of titanium oxide nanostructures	73
5.2.3	Preparation of suspended Parylene-C coatings	75
5.2.4	Accelerated Aging	75
5.2.5	Adhesion Testing	76
5.2.6	Characterization Methods	78
5.3	Results & discussion	79
5.3.1	Nanostructure morphology analysis	79
5.3.2	Investigation of the specific surface area	83
5.3.3	Material characterisation of titanium oxide nanostructures	84
5.3.4	Hydrothermal formation mechanism of titanium oxide nanostructures	87
5.3.5	Nanostructured Parylene-C interface	91
5.3.6	Parylene-C adhesion on various nanostructure morphologies	92
5.3.7	Influence of silane A-174 on Parylene-C wet adhesion	95
5.3.8	Extended study Parylene-C wet adhesion with flower-like HT-1-6 nanostructures	96
5.3.9	Influence of Parylene-C annealing on nanostructure enhanced adhesion	100
5.4	Chapter summary	101
6	CONCLUSIONS AND OUTLOOK	103
6.1	Conclusion	103
6.2	Outlook	105
A	RUNSHEETS	109
B	COMSOL SIMULATIONS	111
C	MEASUREMENT BENCH SOFTWARE	115
D	DATASHEETS	117

E	NANOSTRUCTURES SEM IMAGES	119
E.1	Images of bare titanium structures grown under different conditions . . . . .	120
E.2	Images of Post-Aging Apatite formation . . . . .	121
E.3	Images of Nanostructures Under Post-Aging Blisters . . . . .	122
