Abstract	v
Zusammenfassung	vii
Acknowledgement	ix
List of Symbols and Abbreviations	xv
1 Introduction	1
1.1 Ultra-low power gas sensing for environmental monitoring	1
1.2 Miniaturized gas sensors	2
1.3 Silicon- and metal oxid-based materials	3
1.3.1 Silicon based sensors	3
1.3.2 Metal oxide based sensors	5
1.3.3 Other materials	7
1.4 Carbon based sensors	8
1.4.1 Graphene	8
1.4.2 Carbon nanotubes	12
1.5 Chapter summary	23
2 Theory and modeling	25
2.1 Carbon nanotube properties	25
2.2 Electronic behaviour	26
2.2.1 Device architecture	27
2.2.2 Carbon nanotube-metal contact	27
2.2.3 Charge transport	30
2.3 Gas sensing	35
2.3.1 Work function shift	36
2.3.2 Schottky barrier modulation	37
2.3.3 Modulation of channel conductivity	38
2.3.4 Gas kinetics	39
2.4 Review of research objectives	41
3 Automated transfer of carbon nanostructures	43
3.1 Motivation	43

Contents

3.2	Transfer process	43
3.2.1	Growth density	46
3.2.2	Alignment quality	47
3.2.3	Step times	48
3.3	Parameter sweep	48
3.4	Controlling ρ_{growth}	52
3.4.1	Flow oriented CNT	53
3.5	Post-transfer processing and device-to-device variations	53
3.5.1	Contact resistance	54
3.5.2	Passivation	56
3.6	Chapter summary	59
4	Flexible process flow and sensor characteristics	61
4.1	Motivation	61
4.2	Process flow	61
4.3	Varying gate distance d_g	63
4.3.1	Simulation of electrostatic potential	63
4.3.2	Receiving substrate fabrication limit and yield	64
4.3.3	Experimental	67
4.3.4	Electrical characteristic	67
4.3.5	Gas response	69
4.4	Further sensor characterization	71
4.4.1	Stability and repeatability	71
4.4.2	Cross-Sensitivity	75
4.5	Chapter summary	81
5	Bias Tuning	83
5.1	Motivation	83
5.2	Sensor characterization	84
5.2.1	Electrical	84
5.2.2	Gas response	91
5.2.3	Close-up look at the contact region	94
5.3	Optimization of biasing conditions for gas sensing	97
5.4	Chapter summary	100
6	Conclusion and Outlook	103
6.1	Conclusions	103
6.1.1	Automated transfer of carbon nanostructures	103
6.2	Flexible process flow and sensor characteristics	104
6.3	Bias Tuning	104

6.4	Outlook	105
6.4.1	Advanced measurement and recovery techniques	105
6.4.2	Functionalization	106
6.4.3	System integration	108
6.4.4	CNTFET modeling	108
7	Appendix	109
7.1	List of devices	109
7.2	Methods	110
7.2.1	Electrical characterization	111
7.2.2	Gas measurement profile	112
7.3	Automated transfer setup	113
7.3.1	Dry-transfer of ultra-clean carbon nanotubes	113
7.3.2	Setup	114
7.3.3	Precision	115
7.4	Post-transfer processing	116
7.4.1	Pt-ALD for improving contact resistance	116
7.4.2	Al ₂ O ₃ -ALD for contact passivation	117
7.5	Varying gate distance	118
7.5.1	Potential simulation	118
7.5.2	Devices tested for varying tip design and etch times	120
7.6	Bias tuning	121
7.6.1	Graphs for V_{ds} -biasing for device 2	121
7.6.2	Estimate of thermionic current I_{thio}	122
7.6.3	Joule-heating vs. barrier modulation	124
7.7	Sensor recovery by self-heating	124
7.7.1	Negative differential conductance	124
7.7.2	Recovery experiments	125
7.8	Functionalization with flame spray pyrolysis	127
7.9	System integration	128
7.9.1	Off-the-shelf carbon nanotube gas sensor platform	128
7.9.2	CMOS-integrated carbon nanotube gas sensor system	131
7.10	Process Runsheets	135
	Bibliography	153
	Publications	175
	Curriculum vitae	179
