Abstract	iii
Abstract (Italiano)	vii
Acknowledgments	xi
List of Symbols	xiii
List of Abbreviations	xvii
List of Figures	xxv
List of Tables	xxxiii
1 Introduction	3
1.1 State-of-the-art wireless implantable sensors	4
1.1.1 Biocompatibility and hemocompatibility	4
1.1.2 Electromagnetic coupling interrogation	6
1.1.3 Acoustic interrogation	9
1.1.4 Literature gaps	10
1.2 State-of-the-art acoustic metamaterials	11
1.2.1 Medical applications	13
1.3 Passive sensors based on acoustic metamaterials	14
1.3.1 Temperature sensing: clinical motivations	14
1.3.2 Pressure sensing: clinical motivations	17
1.3.3 Literature review of wireless implantable sensors	19
1.3.4 Sensing principle: overview	19
1.4 Structure of the Thesis	21
2 Theoretical considerations	25
2.1 Acoustic propagation in layered structures	25
2.1.1 General equations	26
2.1.2 Monolayer	28
2.1.3 Bilayer	32
2.2 Acoustic metamaterial	39
2.2.1 Unit cell design	40
2.2.2 Materials choice	45
2.3 Conclusions	48

3	Acoustic setups	51
3.1	Ultrasound probe	51
3.2	Acoustic setups	55
3.2.1	Spatial averaging setup	56
3.2.2	Time averaging setup	59
3.3	Compensation routine	60
3.4	Conclusions	61
4	Fabrication	63
4.1	Fabrication process overview	63
4.2	Fabrication artifacts in silicon	65
4.2.1	Trapezoidal angle	67
4.2.2	FEM simulation	68
4.2.3	Experimental measurements	72
4.2.4	Discussion	74
4.3	Fabrication artifacts in PDMS	77
4.3.1	FEM Simulation	79
4.3.2	Discussion	80
4.4	Conclusions	82
5	Temperature characterization	85
5.1	In-vitro experimental characterization	85
5.1.1	Signal processing analysis	89
5.1.2	Spatial averaging	89
5.1.3	Statistical analysis	90
5.1.4	Temperature sensitivity and resolution	93
5.2	FEM simulation	97
5.2.1	PDMS modeling	100
5.2.2	Temperature dependency	103
5.3	Discussion	105
5.4	Conclusions	109
6	Temperature characterization with animal tissue	111
6.1	Influence of real tissue on acoustic performance	111
6.2	Experimental characterization: materials and methods	114
6.2.1	TMM: acoustic properties	114
6.2.2	Attenuation measurement	117
6.2.3	Animal tissue preparation	120
6.2.4	Time averaging	122
6.3	Temperature results	125
6.3.1	Time averaging	125
6.3.2	Spatial averaging	129
6.4	Accuracy and compensation strategies	134
6.4.1	FEM simulation	135
6.4.2	Discussion	137

6.4.3	Sensor calibration	138
6.5	Sensor localization	144
6.5.1	Algorithms comparison	144
6.6	Conclusions	148
7	Pressure characterization	151
7.1	In-vitro experimental characterization	152
7.1.1	Experimental pressure sensitivity and resolution	156
7.2	Understanding pressure sensitivity	162
7.2.1	FEM Simulations	164
7.2.2	Monolayer: Uniaxial test	166
7.2.3	Bilayer: bulge test	169
7.3	Discussion	172
7.3.1	Speed of sound vs strain	173
7.3.2	Cases of investigation	173
7.3.3	Spatial gradient of ϵ_{ZZ} in PDMS	177
7.3.4	Pressure sensitivity in the PDMS-Meta	178
7.4	Conclusions	179
8	Conclusions and Outlook	183
8.1	Final conclusions	183
8.2	Outlook	187
8.2.1	Bi-sensing: decoupled modality	187
8.2.2	Transfer to titanium prostheses	188
8.2.3	Design improvements and topology optimization	192
8.2.4	Sensor encapsulation	194
A	Appendix - Oblique Excitation	197
B	Appendix - NDT Supply Acoustic Impedances	199
C	Appendix - Medical Probes	201
D	Appendix - Technical Drawings	203
D.1	Squared sample holder	204
D.2	Pressurized chamber	206
D.3	DIN 59125 Titanium sample	211
E	Appendix - Fabrication Process	213
E.1	Fabrication steps - Micropillars	214
E.2	Fabrication steps - Metapatch release	215
F	Appendix - Residuals	217
G	Appendix - Tissue mimicking materials characterization	219
G.1	TMM Production	220

Contents

G.2 Agar concentration variation	222
G.3 Temperature characterization	223
H Appendix - Pressure characterization	225
H.1 Experimental results - other samples	226
H.2 Design and PDMS material properties variation	229
Bibliography	231
Publications	263
Curriculum Vitae	267
