Acknowledgments	iii
Summary	v
Zusammenfassung	ix
1 Introduction	1
1.1 Market Survey and Future Trends	1
1.2 Technology Computer Aided Design	3
1.2.1 Historical Development and State-of-the-Art	3
1.2.2 Challenges for the Simulation of Optoelectronic Devices	4
1.3 Scope	5
1.4 Contents	5
2 Optical Modeling	7
2.1 Helmholtz Equation in Frequency Domain	7
2.2 Green's Function Solutions in Various Dimensions	10
2.3 Langevin Noise Sources	10
2.4 Gain and Spontaneous Emission	11
2.4.1 Optical Gain	11
2.4.2 Fluctuation-Dissipation Theorem	11
2.4.3 Correlation Functions for Spontaneous Currents	14

3	Amplified Spontaneous Emission in Edge-Emitting Devices	17
3.1	Translation Invariant Structures	17
3.2	Modal Decomposition	18
3.3	Green's Function Solution of the Inhomogeneous 1-D Problem	19
3.3.1	General Considerations	19
3.3.2	Special Expressions for Fabry-Perot Cavities	21
3.4	Power Flow and Electromagnetic Energy Density in 3-D	22
3.4.1	Poynting's Vector and Facet Power	23
3.4.2	Electromagnetic Energy Density	23
3.5	Simplifications for 2-D Transverse Simulation Domains	24
3.6	Broadband versus Narrowband Modeling	26
3.7	Laser Modeling—Taylor Approximations of the Wronskian	26
3.8	Numerical Broadband ASE Model	30
4	Finite-Element-Techniques for Light Propagation in Optically Large Devices	33
4.1	FEM Fundamentals	34
4.1.1	Model Problem	34
4.1.2	Method of Weighted Residuals	35
4.2	Specially Adopted Methods for the Helmholtz Equation	36
4.2.1	Conformal Method: The Partition of Unity Finite Element Method	36
4.2.2	Discontinuous Method: The Ultra-Weak Variational Formulation	38
4.2.3	Advantages and Pitfalls	40
4.3	Discontinuous Galerkin FEM	40
4.3.1	Formal Settings and Basic Results	41
4.3.2	Trefftz Methods for DG-FEM	43
4.3.3	The Ultra-Weak Variational Formulation as a Penalty Trefftz DG-FE Method	45
4.3.4	Numerical and Computational Aspects	49
4.3.5	Fine Meshes or Many Base Functions?	52
4.3.6	Information Reduction	54
4.4	Numerical Implementation	57

5	Comprehensive Electro-Opto-Thermal Device Modeling	59
5.1	Electro-Thermal Device Equations	59
5.2	Model Discretization	61
5.2.1	Discretization of the Poisson Equation	62
5.2.2	Scharfetter-Gummel Discretization of the Particle Current	63
5.3	Numerical Solution	63
6	Results and Applications	65
6.1	SLDs and SOAs—Design and Analysis	66
6.1.1	Calibration and Measurement of Optical Gain	66
6.1.2	2-D Electro-Opto-Thermal Device Simulation	69
6.1.3	3-D Simulation of Semiconductor Optical Amplifiers	96
6.2	Numerical Analysis of the Light Propagation in Optically Large Structures	109
6.2.1	Model Problem	109
6.2.2	Radiation into Free Space	111
6.2.3	Radiation in the Presence of Material Interfaces and Differences to Ray Optics Models	117
7	Conclusion and Outlook	123
7.1	Major Achievements	123
7.2	Outlook	124
A	Publications	125
A.1	Peer-Reviewed Journal Papers	125
A.2	Conference Contributions	125
	Curriculum Vitae	135
